SUMMARY

Computer Science postgraduate (M.Sc.) passionate about software development, with hands-on project experience in React.js, Spring Boot, and RESTful APIs, plus exposure to building GenAI-powered features using the Google Gemini API.

Eager to start my career as a Software/GenAI Developer, learn from real-world systems, and contribute to a growing engineering team.

SKILLS

- **Frontend:** React.js, JavaScript
- **Backend & APIs:** Java, Spring Boot, RESTful API Design, JWT Authentication
- **Databases & Infrastructure:** MySQL, MongoDB, Git/GitHub
- **Generative AI / LLMs:** GenAI application development, LLM integration (Google Gemini API), prompt-driven feature design, NLP, Computer Vision, ML/DL
- **AI/ML & Data:** Python, Random Forest, feature engineering, model evaluation & optimization, data-driven analytics

PROJECTS

UPHI — Unified Patient Healthcare Interface 2026

React.js | Spring Boot | MongoDB | Docker | Gemini API (GenAI/LLM)

- Integrated the Google Gemini API to generate AI-powered clinical summaries and designed 20+ RESTful APIs (Spring Boot, MongoDB) as microservices covering patient records, scheduling, and consent management.
- Implemented JWT-based authentication with role-based access control (RBAC) and containerized the full stack with Docker Compose; mobile app supports QR-based patient verification.

NIQ Media Analytics — Ad Impression Predictor 2026

Python | ML/DL | Random Forest | Feature Engineering

- Applied machine learning to 50,000 real streaming sessions, engineering 5 custom features and evaluating 3 candidate models to uncover ad engagement patterns.
- Optimized Random Forest achieved 99.8% prediction accuracy (error < 0.01 ads/session), projected to unlock 119K+ additional ad impressions; Team DataGrinders shortlisted for the Final Round.

RTO Chatbot — Maharashtra RTO Assistant 2026

Flask | Python | Gemini API | LangChain | RAG

- Built a Flask-based chatbot for Maharashtra RTO queries using the Google Gemini API and LangChain with a Retrieval-Augmented Generation (RAG) pipeline.
- Troubleshooted extensive dependency and API integration issues and refactored the system with a keyword-based fallback approach for reliability.

EDUCATION

Master of Computer Science (M.Sc.) — Fergusson College, Pune 2025 – 2026 (Pursuing)

First Year CGPA: 8.55

Bachelor of Computer Science (B.Sc.) — Sangamner College, Sangamner 2022 – 2025

CGPA: 8.98

HSC (12th Board) — S.S.G.M. College, Kopergaon 2021 – 2022

74.33%

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

- Independently planned and managed the B.Sc. Second Year class trip to Konkan, and co-organised TechnoFest (Science Department festival) — coordinating logistics, budget, and team scheduling.
- Organised the Farewell ceremony and Freshers' Party for B.Sc. students — end-to-end event coordination including venue, programme flow, and volunteer management.

ACHIEVEMENTS & CERTIFICATIONS

- NIQ Media Analytics Challenge — Achieved 99.8% model prediction accuracy; Team DataGrinders shortlisted for the Final Round, Fergusson College, M.Sc. CS 2025.
- 100 Days of Code: The Complete Python Pro Bootcamp — Udemy, Dr. Angela Yu (57 hours), May 2026.
- MCP Workshop: Build AI Automations That Work For You — NxtWave, hands-on project under IIT Guwahati alumnus Revanth Konakanchi, June 2026.
